

IMSYSER INTESTINAL CLEANSE FACTFILE

100% Natural

MANUFACTURER:

BRUNEL PHARMACEUTICA
12 Bundord Sebenza, Edenvale, 1609

SCHEDULING STATUS:

None

PHARMACOLOGICAL CLASSIFICATION:

Complementary Medicine submitted according to
the Complementary Listing System.
Western Herbal Medicine.

INDICATIONS:

IMYSER® Intestinal Cleaner is formulated to help soften and
eliminate impacted intestinal mucus. IMYSER® Intestinal Cleaner
assists in stabilizing immune system, assist with detoxifying your
intestines, assist with metabolism and assist with weight loss.

IDENTIFICATION:

IMYSER® Intestinal Cleaner is a light mottled yellowish brown
powder with having characteristic herbal taste.

CONTRA-INDICATIONS:

Hypersensitivity to any of the ingredients.

STORAGE INSTRUCTIONS:

Store in a cool dry place

DOSAGE AND DIRECTIONS FOR USE:

Adults: The formula should be taken preferably twice per day.
Just mix 2 to 3 tablespoons (10 grams to 15 grams) with any fruit juice
or water, and drink quickly before it bulks up. Best times are first thing in
the morning before breakfast and late afternoon or evening.
Follow with 1 - 2 glasses of water immediately. You do not need to
change your diet but you will have to increase your water intake to 2 to 3
liters per day. Intestinal cleaner should be used for a week and preferably
done once a month for optimal results

KEEP OUT OF THE REACH OF CHILDREN

How to do the cleanse:

The formula should be taken preferably twice per day, just mix 2 to 3 tablespoons with any fruit juice, water, and drink quickly before it bulks up. Best times are first thing in the morning before breakfast and late afternoon or evening. **Follow with 1 - 2 glasses of water immediately** Do not take any medication or supplement for at least 1 hour after taking the formula as the formula will hinder their absorption. You do not need to change your diet but you will have to increase your water intake to 2 to 3 liters per day. You should not get diarrhea and you will be able to go about your normal daily routine.

If you have colon cancer, IBS, leaky gut or any serious digestive challenge, then start with teaspoon quantities and build up to the tablespoon quantities when you comfortably can. You are welcome to call us for more advice. Whilst on the cleanse you may feel bloated and heavy and if a particularly nasty piece of plaque has broken away you may get a headache or feel nauseous as part of the detox routine.

REMEMBER - DRINK PLENTY OF WATER!

Store in dry cool place out of direct sunlight and out of reach of children.

Not Intestinal Cleanser

The purpose of this cleanse is to remove the mucoid plaque which has built-up in the small and large intestine

As a result, there is no need for enemas or colonic irrigation - although beneficial, these only clean the colon, and do nothing for the small intestine where the cleansing is really needed. Mucoid

plaque is a tough ropey like substance and has a slimy, leathery seaweed consistency. Excreted stool colors can range from light tan to black. **Intestinal cleaner should be used for a week and preferably done once a month for optimal results**

Ingredients:

Psyllium, Slippery Elm, Marshmallow root, Fol.Uva Ursi, Herb Menth, Pip, Aloe Ferox, Rad.Taraxaci, Rhiz. Curcum, Cinnamon, Xanth, Fol.Urticae

Imysyer®

Intestinal Cleaner

Formulated to soften
and eliminate impacted
intestinal mucus.

Best Before:
26 June 2010

100%
NATURAL

**HOW DOES
INTESTINAL
CLEANSE WORK?**

Is Your Colon at Risk?

Check the symptoms that apply to you:

- + I have fewer than two full bowel movements per day.
- + I frequently need to strain to move my bowels.
- + I have a protruding belly or "pouch."
- + My bowel movements are small and hard.
- + I often feel sluggish or bloated.
- + I seem to either be constipated or have diarrhea.
- + I rely on laxatives to stay "regular."

If you checked one or more of the symptoms above, you should make colon health a priority.

If you want to experience your best health, an essential requirement is keeping your colorectal region clean and healthy.

Keeping your colon and rectum clean and healthy provides a number of health benefits, the main ones being:

A lowered risk of developing colorectal cancer, the second or third leading type of cancer in most industrialized countries.

A lowered risk of experiencing irritable bowel syndrome, chronic constipation, and chronic diarrhea.

A lowered risk of developing hemorrhoids.

Less objectionable gas production.

More efficient absorption of water and minerals.

A feeling of lightness, comfort, and well-being in your abdominal region.

Your colon and rectum are collectively referred to as your large intestine, which is the last part of your digestive tract.

Water and Nutrient Absorption

The mucosal lining of your large intestine is lined with tiny pits that open into long, tube-like intestinal glands; these glands are lined with specialized cells that absorb water, and other specialized cells (goblet cells) that release mucous into your large intestine to lubricate your stools and to protect the lining of your large intestine against acidic substances and noxious gases. The specialized cells that absorb water from your waste materials are responsible for about 10 percent of the water that you absorb from the foods and beverages that you ingest; the remaining 90 percent is absorbed by cells that line your small intestine. This 10 percent of water absorption in your large intestine amounts to anywhere between a pint and a quart of water in most people, and represents a significant portion of your body's daily intake of water. As water is absorbed from the waste material in your colon, so are some nutrients, mainly minerals like sodium and chloride. It takes anywhere between 3 to 10 hours for your large intestine to absorb enough water from waste material to turn it into solid or partially solid stools.

Your stools consist mainly of water, mucous, fiber, old cells from your intestinal lining, millions of microorganisms, and small amounts of inorganic salts. When your rectal pouch is distended with enough feces to trigger a contractile reflex, your feces are pushed out through your anus. When you consciously contract your abdominal wall, your diaphragm moves downward and helps open up muscles that line your anal sphincter. Your rectum is lined with three horizontal folds, called your rectal valves; these valves are what prevent stools from passing through your anal sphincter when you pass gas. If you choose not to release stools when you experience an urge to do so, your reflex contractions may stop, in which case you likely won't have a significant bowel movement until the next mass peristalsis occurs.

Some Interesting Facts On The Ingredients

Dandelion root - Taraxacum officinale

A cosmopolitan weed and a common garden weed of worldwide medicinal importance, so incredibly versatile and so valuable in this present time of stress and tension and worry, We urge everyone to grow dandelions in their gardens!

Dandelion's therapeutic category is that of a tonic and a diuretic. Excellent in treating the digestive system, the liver, the gall-bladder, kidneys, even the whole urinary tract, dandelion is perfect in this formula for its potassium content and its treatment of dyspepsia and constipation and as a toner for a sluggish bowel. It has a huge number of astonishing properties and it literally moves, rejuvenates and revitalizes the cells and in this formula it works its toning : easing properties within the bowel, easing and detoxifying and clearing out old rubbish!

Just a few young green dandelion leaves in the daily salad will give the whole system a boost!

Senna - Cassia angustifolia (to the right)

Also known as Senna alexandrina Senna was introduced to Europe as a natural laxative by Arab physicians in the 9th and 10th centuries. From then on it has remained one of the most trusted, cherished, and safe laxative in the world. The leaves and pods are used and it has a sweet cooling effect and antibacterial properties. Its therapeutic effect in this formula is to reduce griping and a tea of senna pods or leaves has been taken over the centuries for stubborn constipation. In this formula very little is used, making it safe for colon cleansing but at the same time offering a gentle and soft bowel movement.

Discuss this with your doctor (contraindicated during pregnancy), for colitis and for spastic constipation.

Psyllium husk - Plantago afra

This is a small and prolific annual herb that has inconspicuous flowers that quickly turn into seeds. These tiny seeds have a husk – a papery shell – around them that is easily separated from the seed. Originating in Europe, India and Iran where it is grown today as a valuable crop (it was previously known as Plantago psyllium), it is an important pharmaceutical product.

Its therapeutic category is that it is a safe, natural, bulking, gentle laxative. Excellent for chronic-constipation, it produces a soft and manageable stool because of the lubricating and softening action of the tiny husks. For those suffering from irritable bowel syndrome, from diarrhoea and inflammatory gastrointestinal problems, psyllium husks are wonderfully comforting as they build soft bulk, but still retain water, and they help to promote peristalsis.

Liver & Gallbladder Flush

Method as stipulated by Dr Hulda Clark

Cleansing the liver of stones dramatically improves digestion, which is the basis of your whole health. You can expect your allergies to disappear, too, more with each cleanse you do! Incredibly, it also eliminates shoulder, upper arm, and upper back pain. You have more energy and an increased sense of well being. It is the job of the liver to make bile, 1 to 1.5 quarts in a day! The liver is full of tubes (bile tubing) that deliver the bile to one large tube (the common bile duct). The gallbladder is attached to the common bile duct and acts as a storage reservoir. Eating fat or protein triggers the gallbladder to squeeze itself empty after about twenty minutes, and the stored bile finishes its trip down the common bile duct to the intestine. For many persons, including children, the bile tubing is choked with stones. Some develop allergies or hives but some have no symptoms.

When the gallbladder is scanned or X-rayed nothing is seen. Typically, they are not in the gallbladder. Not only that, most are too small and not calcified, a prerequisite for visibility on an X-ray. As the stones grow and increase in quantity, the liver makes less bile. Imagine the situation if your garden hose had marbles in it. Much less water would flow, which in turn would decrease the ability of the hose to squirt out the marbles. With these stones, much less cholesterol leaves the body, and cholesterol levels rise. Stones, being porous, can pick up all the bacteria, cysts, viruses and parasites that are passing through the liver. In this way "nests" of infection are formed, forever supplying the body with fresh bacteria. No stomach infection such as ulcers or intestinal bloating can be cured permanently without removing these stones from the liver.

How to do the cleanse

You will need:

½ a cup of extra virgin olive

Juice from 1 grapefruit (Get carton if out of season)

4 tablespoons of Epsom Salts

Choose a day like Saturday for the cleanse, since you will be able to rest the next day. Take no medicines, vitamins or pills that you can do without; they could prevent success. Eat a light breakfast and lunch (no milk and no fried foods). Do not eat solids after 2pm. You may drink water and/or fruit juices.

6pm Dissolve 1 tablespoon epsom salts in a glass of juice or water and drink. If the drink is cold it will taste better. 8pm Dissolve 1 tablespoon epsom salts in a glass of juice or water and drink. 10pm Mix ½ cup olive oil with ½ cup grapefruit juice. Drink at bedside then immediately lie down in bed and stay as still as possible for ½ an hour. Fall asleep.

In the morning **DRINK PLENTY OF WATER**

6am Dissolve 1 tablespoon epsom salts in a glass of juice or water and drink.

8am Dissolve 1 tablespoon epsom salts in a glass of juice or water and drink.

Expect diarrhoea. You should stop having to go to the toilet by about 9.30am. At 10am have some fruit then at 12am have a light lunch. From mid afternoon you can eat normally.

If you haven't done this flush before you will have to do between 6 to 12 flushes in order to completely clear the liver. Wait at least 1 week between flushes.

Testimonials

Fozy B. Age 45

I've been a chronic diabetes sufferer on heavy insulin since I can't remember.

I've been taking the cleanse for 2 months now and I've got my life back again. I'm taking 40 units less of insulin per day and my weight is going down nicely. My skin which is very important to me is glowing like a baby's and I feel like a human being again. I'm feeling very tearful as I write this. Imsyser has saved my life – thank you.

Isabella G. Age 36

I got the deep intestinal cleanse for my mother who has arthritis and severe aches and pains. Over the years I've sent her for treatments and put her on all kinds of supplements and none of these ever worked.

Since she started the cleanse program all of her troubles disappeared within 1 week. She's now happy and well.

Your products
really work!

Testimonials

Morgan S. Age 57

Since my heart attack 15 years ago I've been taking more and more medicines and my health has been deteriorating. I never knew that cleaning the intestines properly could bring my health back.

Your product really really works – a heartfelt thank you.

Samuel T. Age 18

I'm into martial arts and I thought I was fit. My mum finally got me to do some intestinal cleaning. I can train for longer and my strength has shot up the roof. I also had eczema and that has disappeared. Thanks mum.

Miriam K. Age 28

It's not fun having asthma. I was told I'd be on cortizone and pumps for the rest of my life. It's taken me 4 months to do the intestinal cleanse program.

I can't believe it but I am medication free and my size has gone down from 44 to 38. I feel brilliant.
